NanoSpeed ${ }^{\text {TM }}$ Broadband 1x2 Series Fiber Optical Switch (SMF, PMF, High Power)
(Protected by U.S. patent 7,403,677B1 and pending patents)

Product Description
The NanoSpeed ${ }^{\text {TM }}$ Series $1 \times 2$ solid-state fiber optic switch connects optical channels by redirecting an incoming optical signal into a selected output optical fiber. This is achieved using patent non-mechanical configurations with solid-state all-crystal designs, which eliminates the need for mechanical movement and organic materials. The broadband series of NS fiber optic switch is designed to meet the most operation requirements of wave length band in addition of ultra-high reliability, fast response time, and continuous switching operation. This series of switches are bidirectional intrinsically.

Agiltron's PCB driver listed in the web is recommended to operate this device, featuring high efficiency and low cost with 12 V DC power and TTL control signal.

[1] Measured without connectors.
[2] Defined at $1310 \mathrm{~nm} / 1550 \mathrm{~nm}$. For the shorter wavelength, the handling power may be reduced, please contact us for more information.

[1]. High power switch isn't available for the wavelength shorter than 960 nm
[2]. There isn't any connector in the high power switches normally. Please contact us for high power connectors.
